

Seats, Seals & Packing Kits

RXV-SSP

Valve soft goods and sealing components selected for geometry, media compatibility, pressure and temperature.

Product division: Valves & Pneumatics

Datasheet type: Product-family selection and compliance template

Commercial status: Final manufacturer, dimensions, performance and availability are confirmed in the quotation.

Standards, editions, conformity route and supporting documents are confirmed against the exact manufacturer, configuration, intended use and customer specification before order acceptance.

Selection data and supply scope

Component types	Seats, body seals, stem seals, packing, O-rings and gaskets
Required data	Valve model, size, class, dimensions, medium, pressure and temperature
Materials	PTFE, RPTFE, PEEK, EPDM, NBR, FKM, graphite and specified compounds
Geometry	OEM reference, drawing, sample or measured dimensions
Testing	Material or dimensional verification as agreed
Documentation	Material declaration, batch traceability and inspection evidence as available

Capabilities and typical applications

Key capabilities	Typical applications
Valve seats, O-rings, stem seals, gland packing and gaskets	Valve maintenance
Elastomer, fluoropolymer, graphite and engineered materials	Leakage repair
OEM-reference, dimensional or drawing-based matching	High-temperature service
Material certification and batch traceability where available	Chemical compatibility

Applicable standards and technical references

The references below are a review framework. Only the standards applicable to the exact product, material, size, configuration and intended use are stated as confirmed in the quotation and final manufacturer documentation.

Area	Reference	Applicability / evidence
Quality management	ISO 9001	Manufacturer certificate and scope verified for the selected source
Valve design	ISO / EN / API / ASME product standards	Exact design standard selected by valve type and application
Pressure testing	EN 12266 / API 598	Applied where relevant to valve type and project specification
Flanges / end connections	EN 1092 / ASME B16 series / ISO	Applied to the ordered connection system
Actuator interface	ISO 5211	Applied to compatible part-turn actuator mounting arrangements
Materials	EN / ASTM / ASME material specifications	Exact body, trim, seat and seal materials confirmed per order

EU conformity and product status

EU conformity status	Reviewed according to valve type, pressure data, fluid group, actuation and intended use
Pressure equipment	PED requirements considered where the product and operating limits are within scope
CE marking	Applied only where legally required for the supplied configuration
EU declaration	Available where legally required and confirmed before order acceptance

COMPLIANCE CONTROL

Standards, editions, conformity route and supporting documents are confirmed against the exact manufacturer, configuration, intended use and customer specification before order acceptance.

Documentation available where applicable and agreed

Manufacturer datasheet	Final source data for the selected model and configuration
Certificate of Conformity	Product and order reference confirmation according to the agreed source
Material Test Certificate	EN 10204 type 2.2, 3.1 or 3.2 where requested and available
Inspection / test records	Dimensional, pressure, hydro, performance, balancing or functional reports as applicable
Process certificates	Heat treatment, coating, surface finish or other manufacturing records where required
Traceability	Batch, heat, lot or serial records according to product and supply route

Information to include with the enquiry

1	Product, manufacturer, model, part number, drawing or sample reference
2	Quantity, required delivery date, intended application and operating conditions
3	Materials, dimensions, critical performance requirements and customer specifications
4	Mandatory standards plus required EU declarations, certificates, inspection records and document language
